BlackLine’s unified cloud platform integrates with and complements Microsoft Dynamics AX, enabling fast-growing companies to close the gaps left in financial close accounting processes.

The results
Achieve a more effective, efficient, and accurate period-end close with real-time visibility into close progress, results, and processes. Customers have used BlackLine to increase overall accountability, further improve their accounting processes, and simplify their compliance processes.

BlackLine adds automation to processes that historically live outside of Dynamics AX, and will scale with companies as they grow.
Business Impacts

Get More Out of Financial Management & Analytical Accounting
Add deep accounting capabilities to help provide operational support beyond the GL, AP/AR, and asset management.

Gain real-time visibility
Transactions for all accounts are visible from a single dashboard. Easily view Dynamics AX's general ledger and bank statement transactions side by side. Access account details securely in BlackLine.

Dramatically increase efficiency
Reconcile millions of transactions in less time. Spend more time focusing on value-adding analysis and waste less time on transactional and manual processes.

Reduce costs
Eliminate the need for expensive hardware and onsite maintenance with BlackLine's cloud-based platform. Take advantage of quarterly upgrades and new features and functions immediately, without additional cost—and without waiting for IT to implement.

Reduce Risk
BlackLine solutions are designed to catch discrepancies faster. Improve accuracy and avoid formula and formatting errors common to manual data export processes.

Key Features
Here's how BlackLine delivers a more advanced and modernized approach to F&A for companies using Microsoft Dynamics AX:

Account Reconciliations:
Verify account balances across all balance sheet accounts by comparing data between your general ledger and bank statements. Investigate discrepancies and make required corrections.

Task Management & Workflows:
Keep track of your close progress and improve productivity on your team with integrated, cross-product task management, custom workflows, and auto-certification.

Journal Entry Management:
Centralize manual journal entries in a controlled, templated manner. Create, review, and approach period-specific and recurring journal entries along with all supporting documentation.

Transaction Matching:
Stop ticking and tying with high-volume transaction matching. Reconcile accounts daily, and automatically create journal entries from matched and unmatched transactions.
