Microsoft Dynamics GP represents a significant evolution for companies moving toward adoption of more advanced accounting tools. It provides accounting and finance teams with greater transparency in the collection, management, and tracking of business and financial data.

Out of the box, Dynamics GP helps with many accounting functions and reporting capabilities, and enables growing companies to operate efficiently and successfully.

Most financial systems—including Dynamics GP—were not designed to meet the needs of the modern era of accounting processes, and cannot fully address the manual, time-consuming nature of traditional accounting processes.

BlackLine complements Microsoft Dynamics GP to provide the accuracy and clear ownership of tasks that traditional accounting practices and legacy standards cannot.

For mid-sized companies, BlackLine allows multiple people to access, add, and delete details without worrying about version control or data integrity risks. With BlackLine, companies can fully manage their close processes with approval workflows, high-volume transaction matching, automated journal entries, data integration, and more.

BlackLine adds automation to processes that historically live outside of Dynamics GP and will scale with companies as they grow.
**Business Impacts**

**Get More Out of Financial Management & Analytical Accounting.** Gain broader reconciliation abilities, such as calculated balance and capital/loan amortization with integrated spreadsheets. Accounting means more than bank reconciliations.

**Gain real-time visibility** of all transactions for all accounts from a single dashboard. Easily view Dynamics GP’s general ledger and bank statement transactions side by side. Access account details securely in BlackLine.

**Dramatically increase efficiency.** Reconcile millions of transactions in less time. Spend more time focusing on value-adding analysis and waste less time on transactional and manual processes.

**Reduce costs.** Eliminate the need for expensive hardware and onsite maintenance with BlackLine's cloud-based platform. Take advantage of quarterly upgrades and new features and functions immediately, without additional cost—and without waiting for IT to implement.

**Reduce risk** with powerful solutions designed to catch discrepancies faster. Improve accuracy and avoid formula and formatting errors common to manual data export processes.

**Key Features**

Here’s how BlackLine delivers a more advanced and modernized approach to F&A for companies using Microsoft Dynamics GP:

**Account Reconciliations:** Verify account balances across all balance sheet accounts by comparing data between your general ledger and bank statements. Investigate discrepancies and make required corrections.

**Task Management & Workflows:** Keep track of your close progress and improve productivity on your team with integrated, cross-product task management, custom workflows, and auto-certification.

**Journal Entry Management:** Centralize manual journal entries in a controlled, templated manner. Create, review, and approve period-specific and recurring journal entries along with all supporting documentation.

**Transaction Matching:** Stop ticking and tying with high-volume transaction matching, reconcile accounts daily, and automatically create journal entries from matched and unmatched transactions.

**Reporting & Analytics:** Add to Dynamics GP reporting functionality with actionable intelligence, and hone your financial close process with customizable enhanced reports and trend analysis.

**Data Integration:** Move your data with confidence and save time formatting. BlackLine’s connector will automatically retrieve general ledger account balances and subledger balances into the correct format.
